pallet:
13 500 pcs.

The **PRO NATURA** disposable paper cups collection can be divided into three categories:

BIO are cups made of bleached cellulose with a coating of natural origin.

The subtle **NU BIO** print allows customers to be aware of the pro-ecological value of the product.

BIO BP or cups made of unbleached cellulose, derived from quickly renewable natural raw materials such as bamboo and cereals. The coating, providing adequate barrier is also of natural origin.

The **NU BIO CUP** print improves the user's awareness of the product's ecological value.

DISPERSION, i.e. cups in which the coating layer has been eliminated. Thanks to this method the material is fully renewable and the cups are fully recyclable.

BIO BP CUP

box:
 500 pcs.
pallet:
 18 000 pcs.

FUTURA biodegradable dishes are made on the basis of bagasse, i.e. dried sugar cane fibres. After fragmentation, the raw material turns into a pulp, which is an excellent material for the production of products such as bowls, plates and trays. The items made from this material are 100% biodegradable and compostable. Bagasse packaging is a great counterbalance to Styrofoam and other plastic products.

These products do not leak and are resistant to fat as well as high and low temperatures. In addition, they are stiff and comfortable to use.

OVAL PLATE

dimension:
318x255x22 mm
code:
